Monospaced 16 B I Step 4, window shari...

There is support for presenting application windows in the *Whiteboard*. This is useful for discussing text, images, drawings, spread sheets, etc. directly from any other application o

The image present is put in the back page so that anyone can view it and write on top o

"Only" the owner make changes to t in this case the im *Photoshop*. We b best way of struct document sharing consumption, cro security and ease

The other particip draw and write an changes that are p others.

Hint: Remember that this can be any application window on your machine! This includes sub-window within an application if necessary (for example, the actual spread sheet in *MS* toolbars and menus).
