

NetRestore & NetRestore Helper Overview by Scott Doenges

The University of Utah

Student Computing Labs **SCL**

What are they?

- Feature-filled GUIs for the ASR command line tool included with 10.2.2
- Tools for creating and restoring ASR images
- made by Mike Bombich

Features

- NRH now creates ASR images - no longer need to use Carbon Copy Cloner.
- Pre- and Post-action scripts can set:
 - IP settings
 - Open Firmware Password
 - Computer name

Features

- NetRestore restores from local volumes or via AFP/HTTP
 - AFP file size limit - no longer 2 GB?
 - HTTP limited to 10 GB images from Apache 2.x, 2 GB from Apache 1.x

Features

- Creates a NetInstall-Restore image to NetBoot and perform automated mass-restores over the network.
- Customizable menu lets you add your own tools (i.e. DiskWarrior).

Features

- GUIs for setting up remote configuration files and custom ASR image presets:
- Quickly set up presets by putting items in the Resources folder:
 - ASR Images
 - Pre- and Post-action scripts
 - Package installers

Usefulness

- A complete solution for mass-imaging Macs?
- Combined with Apple Remote Desktop, maybe...

System Requirements

- Mac OS X 10.2.2 or greater
- 100 Mb network recommended for network restores.
